

How to Set up a Plug

- 1 Navigate to area.alexandrejublot.com/plugs

- 2 Click on "Add Plug"

- 3 Click the "Plug Name" field.

SERVICES

Create a new PLUG :D

Plug Name

Trigger

Action

Values

ADD STEP

Action

- 4 Type the name of the plug you want.

Setup the Trigger

5

Click on "Action" for the first card called "Trigger".

The screenshot shows a web interface titled "Create a new PLUG :D". At the top, there is a blue header bar with the text "Awesome YouTube Notifier !". Below this, the main content area contains a sequence of steps. The first step is a blue card titled "Trigger" with a lightbulb icon. It has two expandable sections: "Action" and "Values", each with a downward arrow. Below the "Trigger" card is a light blue button labeled "ADD STEP". The second step is a blue card titled "Action" with a lightbulb icon and a trash can icon in the top right corner. It also has an expandable "Action" section with a downward arrow.

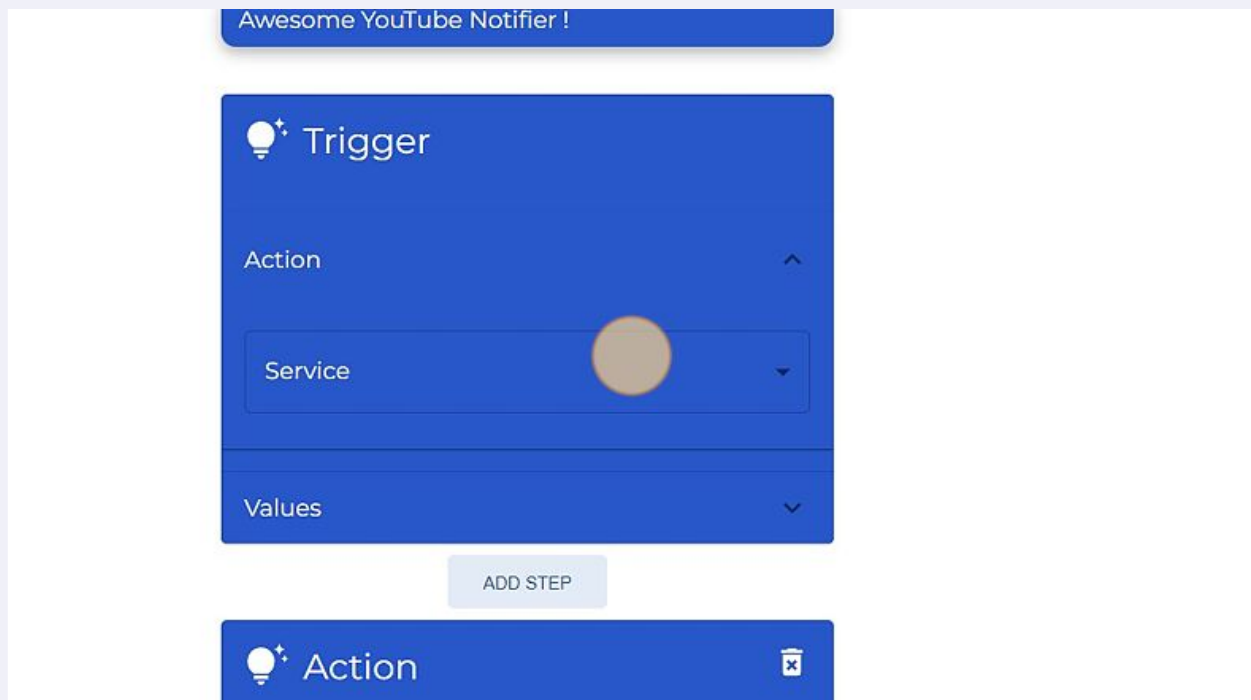

Trigger will be the event that will start the sequence of actions you will define later.

In this example we will use YouTube as a trigger by using the video publishing event to send a Discord message with the video informations.

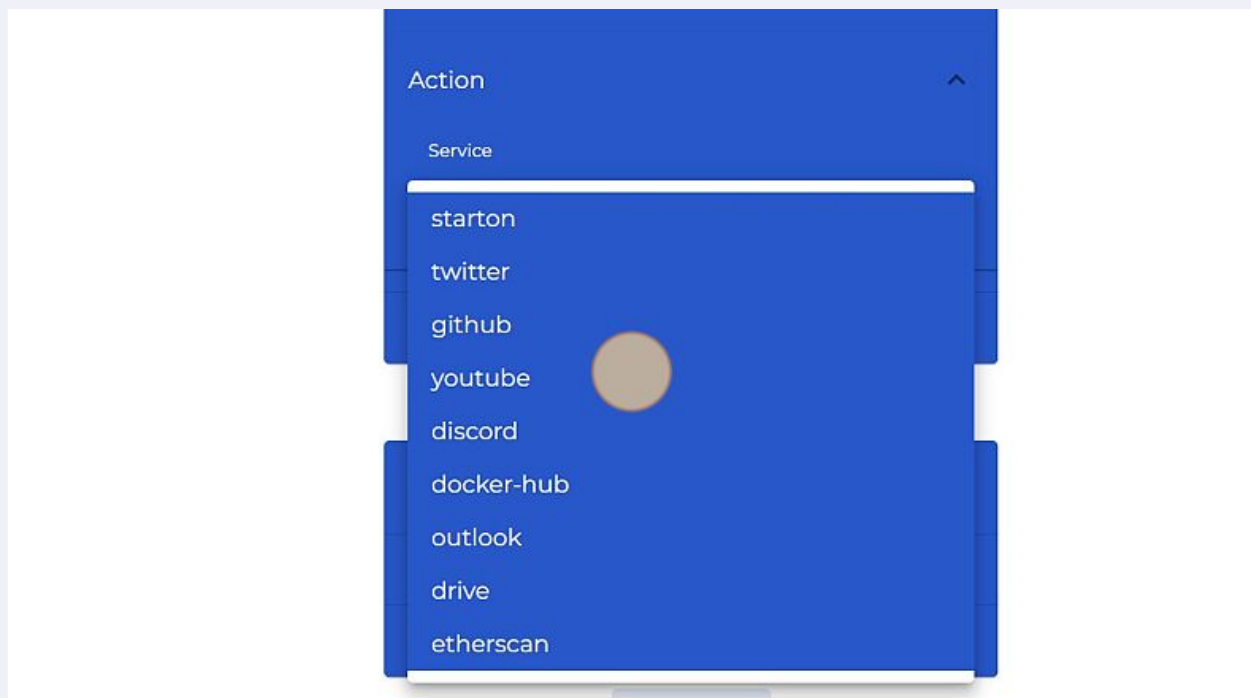

6

Click on "Service" in the "Trigger" card to select the service that will be used to start the plug.

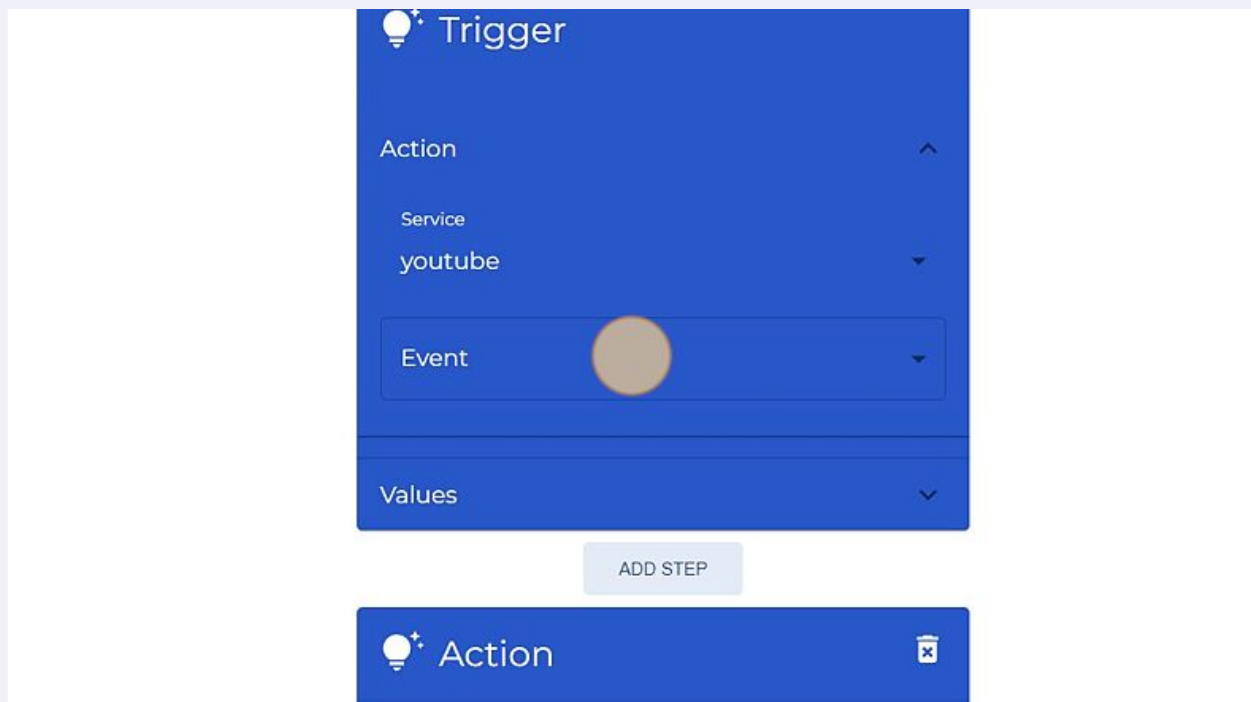

7

Click on the service you want to use.
Ex: YouTube

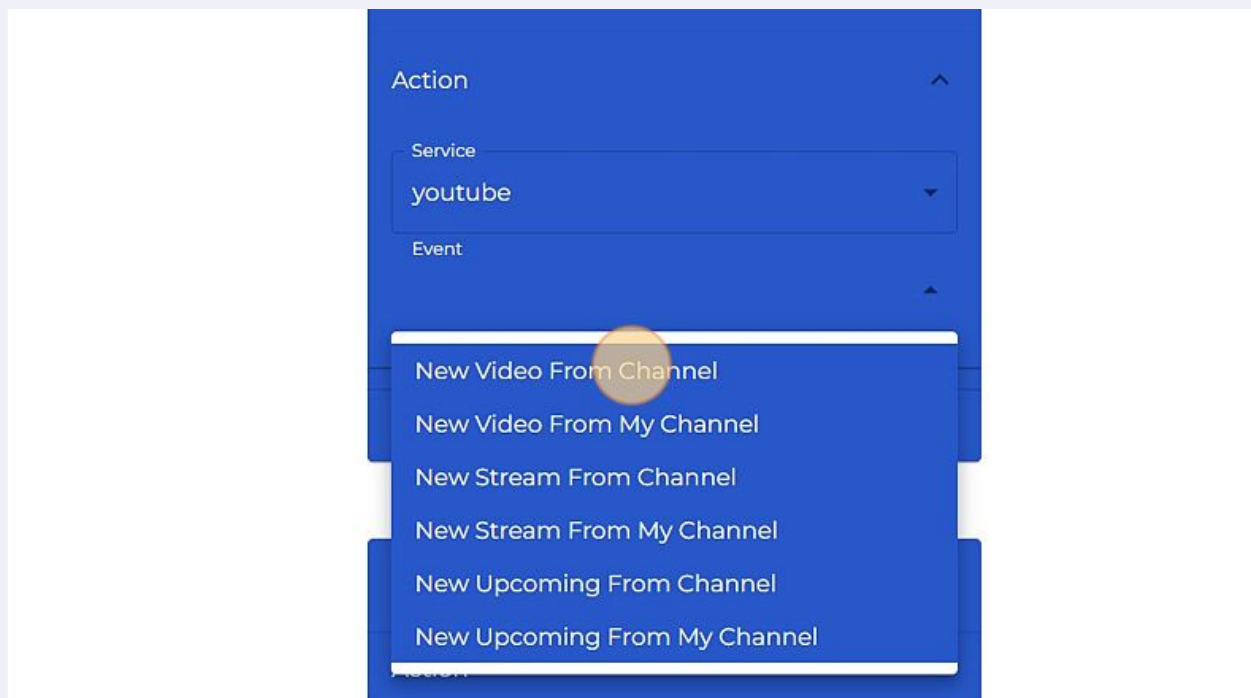

8

Selecting the service allow you to pick an event associated with it by clicking on "Event".

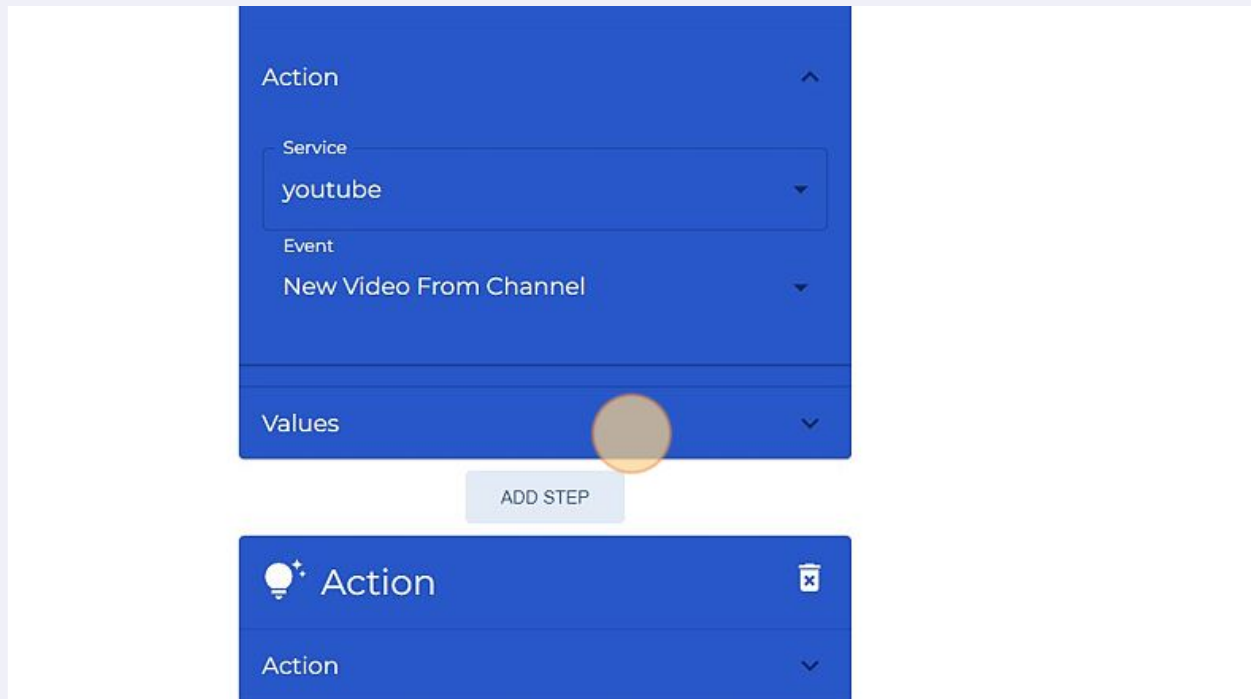

9

Click on the event you want to use.
Ex: "New Video From Channel"

10

(May not be required) Some services and events require additional values to work. Click on "Values" to check the required fields.

(May not be required) If you need to fill some "weird" variables (like "id", "token", etc...) you will probably need to read the service documentation to understand what are the corresponding values.

11

(May not be required) If some values are required click on the text zone and fill the required informations.

The screenshot shows a workflow configuration interface. The first step is a trigger configuration for YouTube. It has a dropdown menu set to 'youtube', an 'Event' dropdown set to 'New Video From Channel', and a 'Values' section. The 'Values' section contains a text input field labeled 'channelId' with a tooltip that reads 'The ID of the channel to watch for new videos'. Below the trigger configuration is a button labeled 'ADD STEP'. The second step is an 'Action' configuration, which is currently empty, showing only the 'Action' dropdown menu.

Congratulation! The first step to setup the plug is now completed, now you need to setup at least one action that will be executed when the Trigger is started.

Setup the first Action

12 Click on "Action".

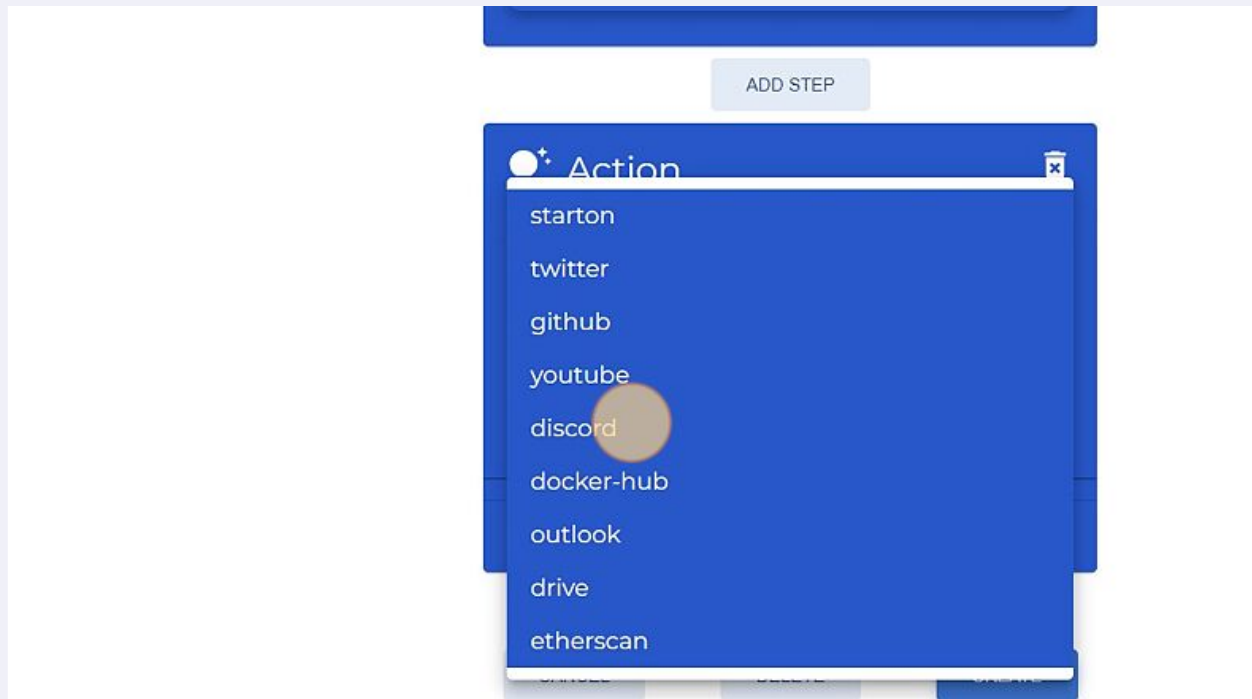

The screenshot shows a workflow editor interface. At the top, there is a blue box labeled 'Values' with a dropdown menu showing 'Select variable' and a selected value 'UCh-wfwBSPmkYdM9_hNK98sg'. Below this is a light blue 'ADD STEP' button. Underneath is another blue box labeled 'Action' with a trash icon in the top right. It has two sections: 'Action' with a dropdown arrow and 'Values' with a dropdown arrow. A light blue 'ADD STEP' button is below the 'Action' box. At the bottom are three buttons: 'CANCEL', 'DELETE', and 'CREATE'.

13 Click on "Service".

The screenshot shows the same workflow editor interface. The 'Action' box is now expanded, showing a dropdown menu for the 'Action' section with 'Service' selected. The 'Values' section remains collapsed. The 'ADD STEP' button and the 'CANCEL', 'DELETE', and 'CREATE' buttons are still visible at the bottom.

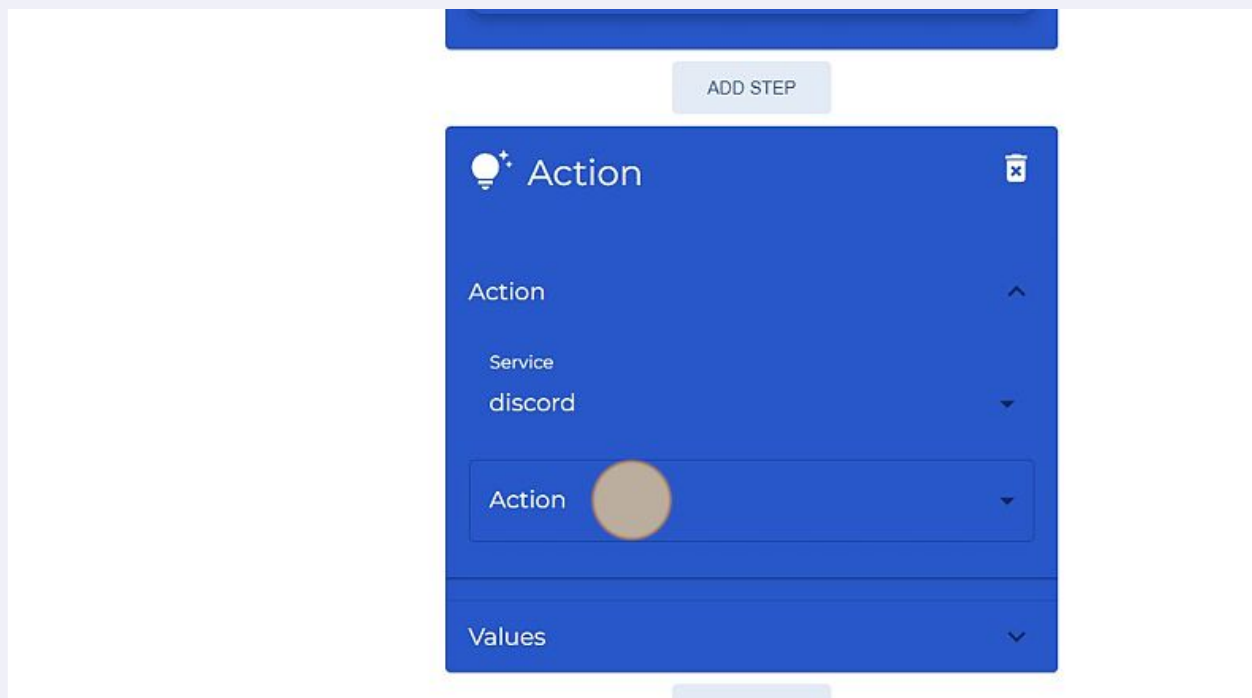

14

Select the service that will be used by your action.
Ex: discord

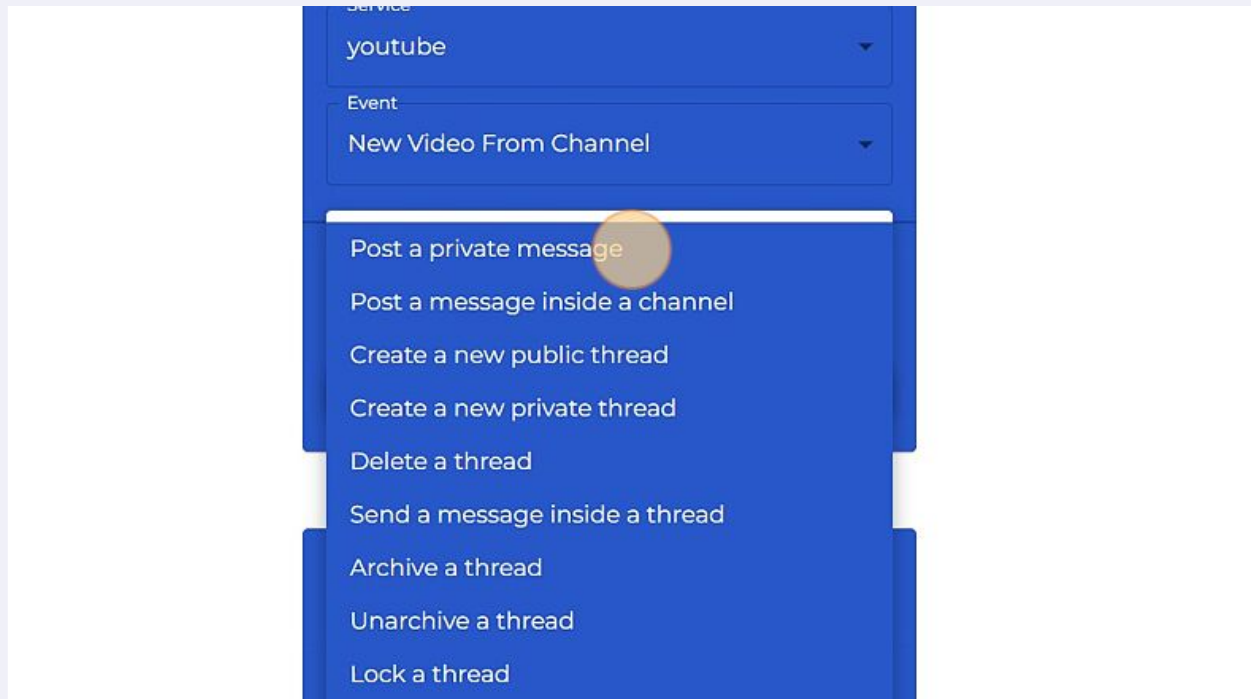

15

Click on "Action" to define the action to be used with the chosen service.

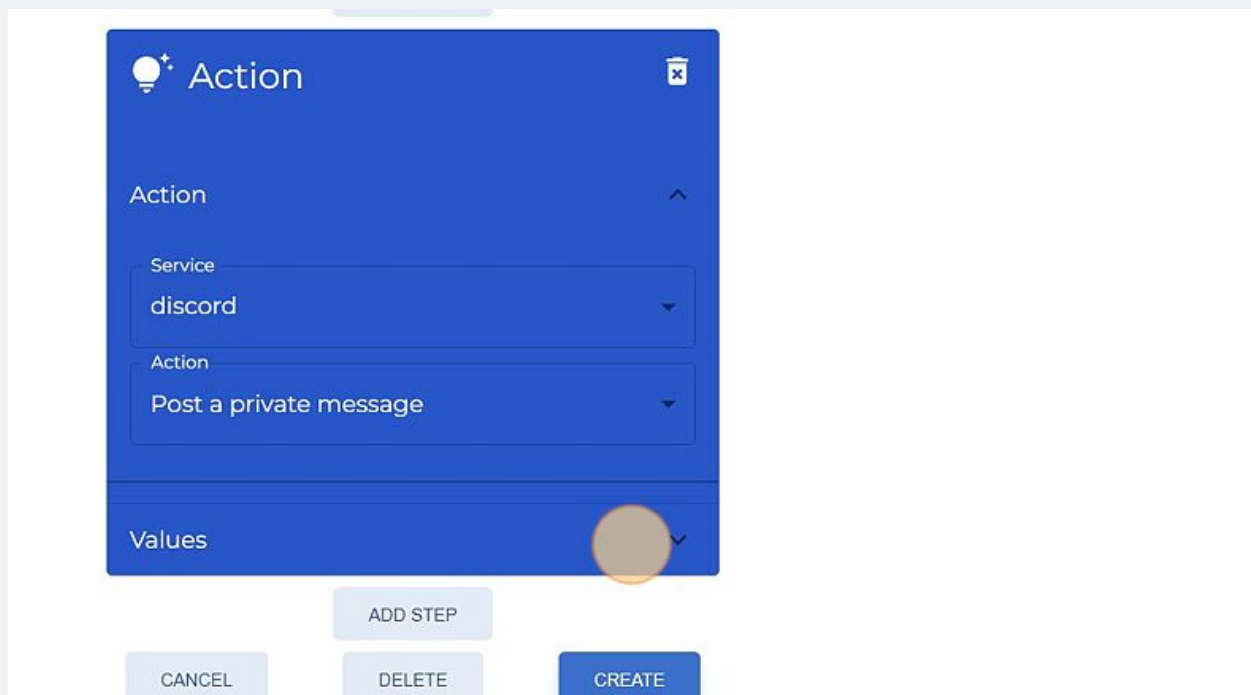

16

Click on the action you want to use.
Ex: "Post a private message"

17

(May not be required) Some services and actions require additional values to work. Click on "Values" to check the required fields.

18

(May not be required) If some values are required click on the text zone and fill the required informations.

The screenshot displays a configuration window for a Discord bot step. The window has a blue header and a white body. The 'Service' dropdown is set to 'discord'. The 'Action' dropdown is set to 'Post a private message'. The 'Values' section is expanded, showing two input fields: 'id' and 'content'. The 'id' field is highlighted with a red circle, and a tooltip above it reads 'The ID of the user to send the message to'. Below the input fields are three buttons: 'CANCEL', 'DELETE', and 'CREATE'. The 'CREATE' button is highlighted in blue.

Service

ADD STEP

CANCEL DELETE CREATE

(Optional) Use Variables in "Values" Sections

19

At any moment in the "Values" section of an action, you can use "variables" to add the data created by a previous action or by the trigger.

Click on the text field where you want to add a variable and then click on "Select variable" on top of it.

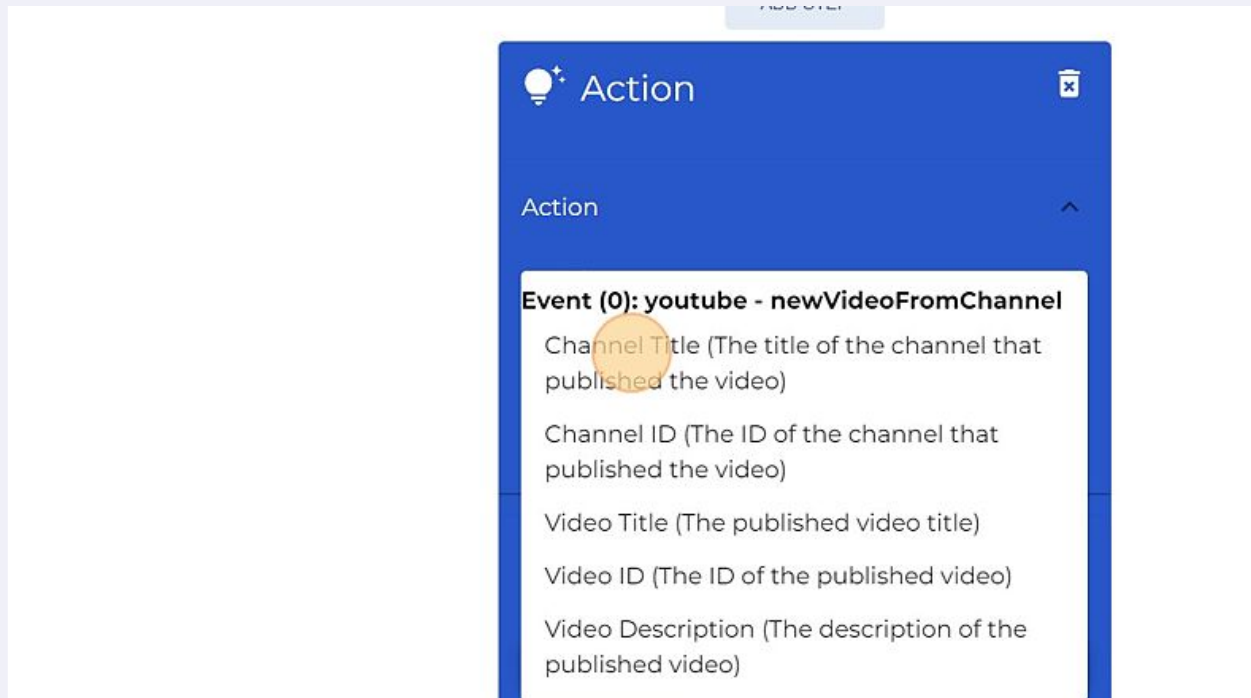

Ex: Add to a message the channel and video informations (the result of the trigger)

The screenshot displays a workflow editor interface. At the top, a dropdown menu is set to 'discord'. Below it, the 'Action' section is configured to 'Post a private message'. The 'Values' section is expanded, showing a text field with the ID '277542601807233024'. Below this is a 'Select variable' button, which is highlighted with a red circle. Underneath the button is a text field containing 'The Channel ' followed by a cursor. At the bottom of the interface, there are three buttons: 'CANCEL', 'DELETE', and 'CREATE'.

20

Click on the variable you want to use, each new trigger or action is separated by a bold section title. This allows you to choose the right variable for a specific action or trigger.

Ex: "Channel Title"

Selecting a variable will add a special tag to your input field. It should look like "\${X.X}", this is a normal behaviour, it represents the value you have selected and will be updated dynamically when executed!

21

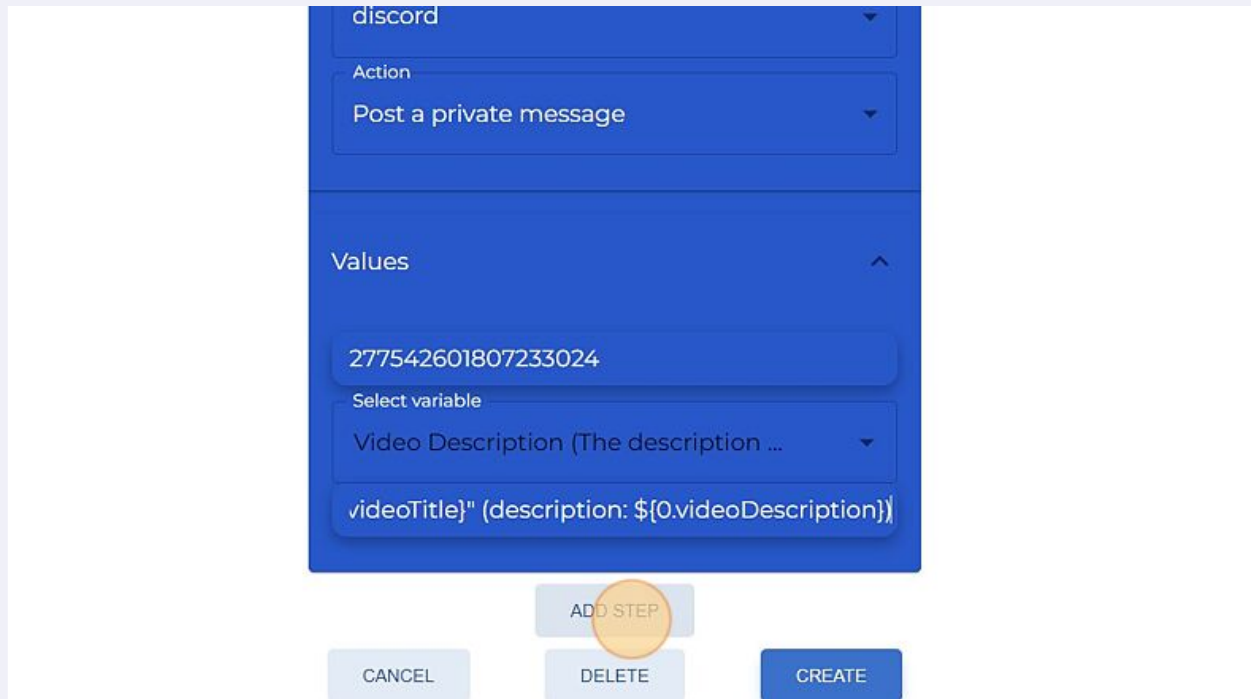

(Optional) You can at any moment click again on "Select variable" to add new variables to your input.

Note: You can use a same variable multiple times.

The screenshot shows a configuration window for a Discord bot. At the top, a dropdown menu is set to 'discord'. Below it, the 'Action' dropdown is set to 'Post a private message'. The 'Values' section is expanded, showing a text input field containing the ID '277542601807233024'. Below this is a 'Select variable' dropdown menu, which is currently set to 'Video Title (The published video title)'. The text area below the dropdown shows the message content: 'ublished a video: "\${0.videoTitle}" (description:'. At the bottom of the window, there are three buttons: 'CANCEL', 'DELETE', and 'CREATE'. An 'ADD STEP' button is also visible above the 'DELETE' button.

(Optional) Add more than one action

22 Click on "Add Step"

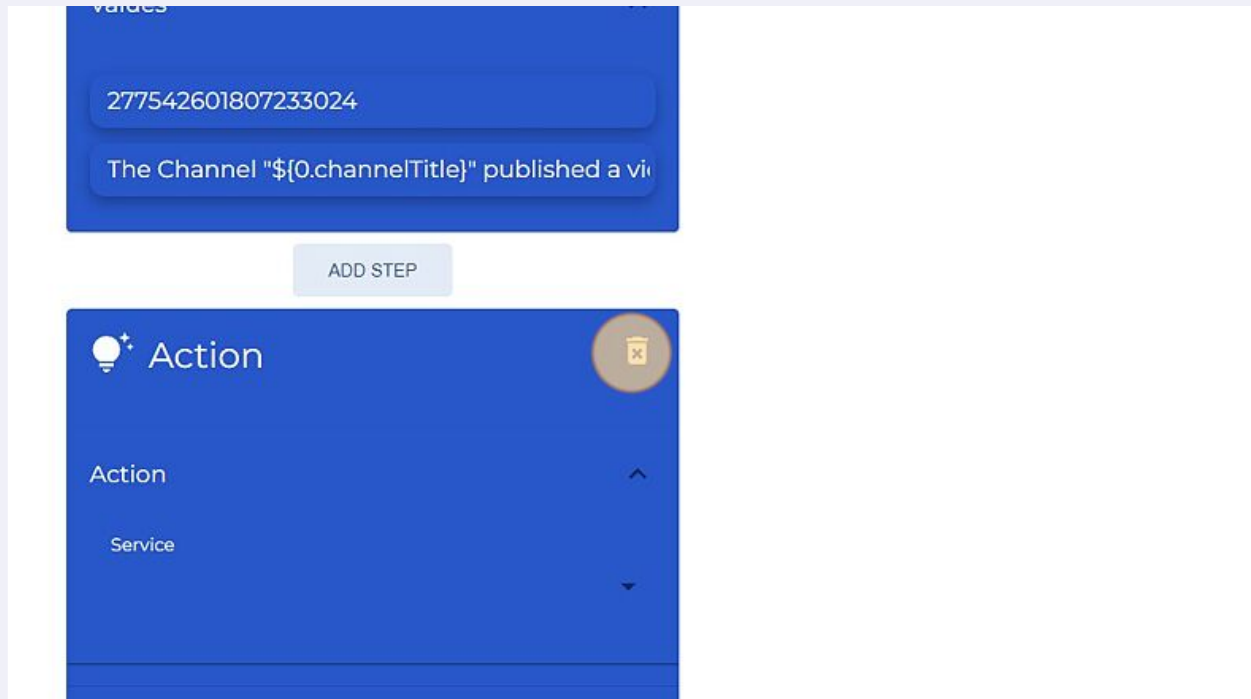

The screenshot shows a configuration window for a Discord bot. At the top, a dropdown menu is set to 'discord'. Below it, the 'Action' dropdown is set to 'Post a private message'. The 'Values' section contains a text input with the ID '277542601807233024', a 'Select variable' dropdown set to 'Video Description (The description ...', and a JSON-style tag input containing 'videoTitle]' (description: \${0.videoDescription})'. At the bottom, there are three buttons: 'CANCEL', 'DELETE', and 'CREATE'. A yellow circular callout with the text 'ADD STEP' is positioned over the 'DELETE' button.

(Optional) Delete an action

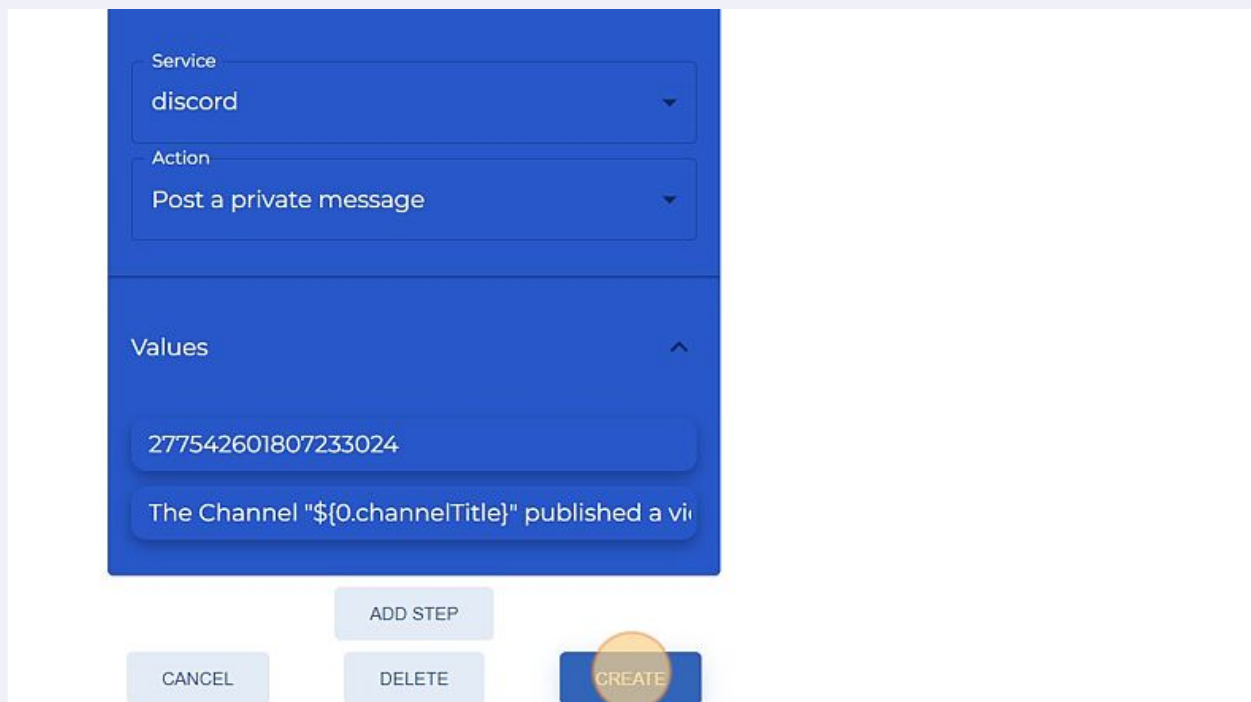

Alert! Be very carefull when deleting an action, this will not update all the variables of your actions. You will need to select them all again to have the correct tag.

- 23** Click on the trash icon in the action card you want to delete.

Create the plug

24 Click on "Create"

The screenshot shows a configuration window for a Discord plugin. It has a blue header and a white body. The 'Service' dropdown is set to 'discord'. The 'Action' dropdown is set to 'Post a private message'. The 'Values' section is expanded, showing a text input with the ID '277542601807233024' and a text area with the message 'The Channel "\${0.channelTitle}" published a vi'. At the bottom, there are three buttons: 'CANCEL', 'DELETE', and 'CREATE' (which is highlighted with a gold circle).

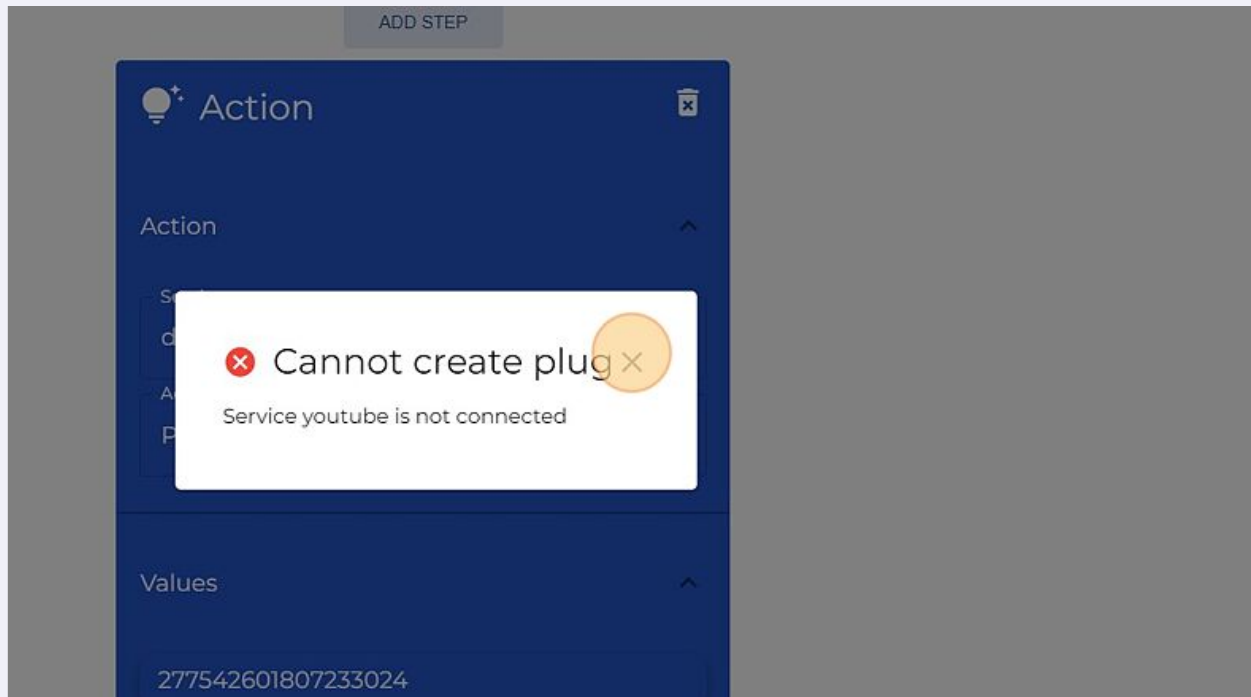

If you are redirected to the plug page and can see your plug, congratulations! You have successfully created your plug.

Help about "Service X not connected"

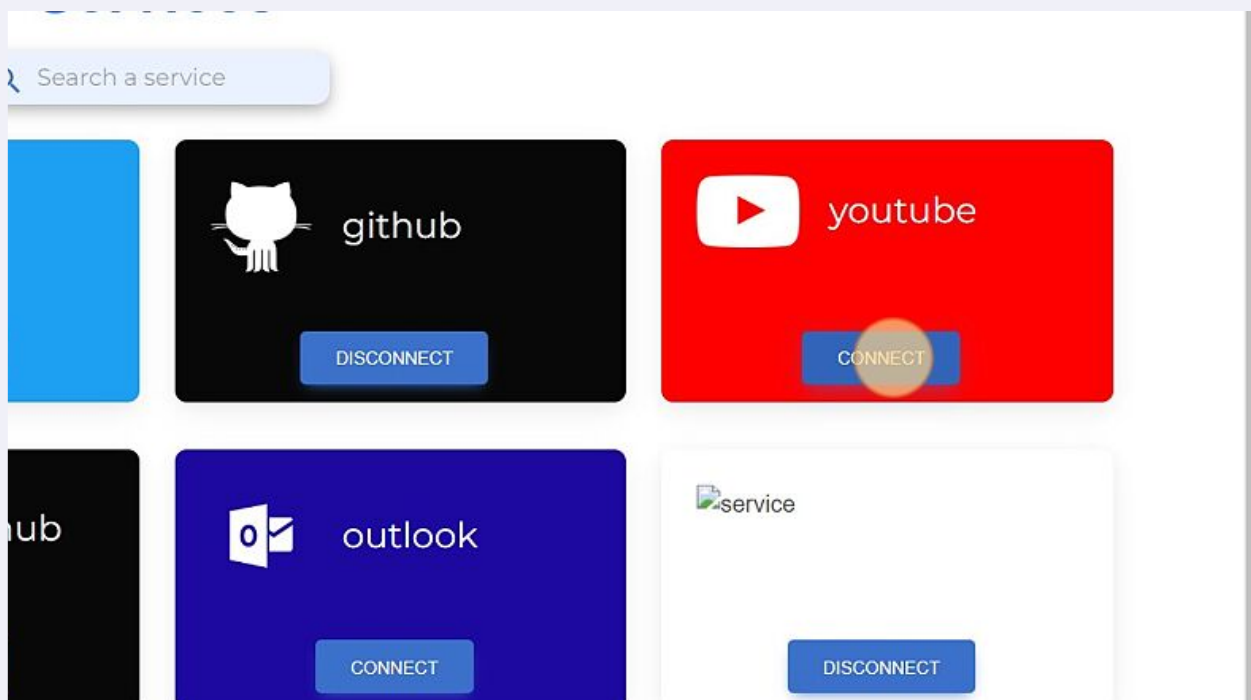

If you have an error while creating the plug because you are not connected, you can follow this procedure to avoid losing your plug.

- 25 Simply ignore the error message.

- 26 In a new tab go to area.alexandrejublot.com/services and click on "Connect" for the required service. If you need more help on connecting to the service, see the help page on this topic.

27

Then go back to your plug creation page and click save again.
