

How to Edit and Save Plugs

- 1 Navigate to area.alexandrejublot.com/plugs

- 2 Click on "Edit" for the wanted plug.

- 3 Edit anything you want, for more help check the plug create help page.

4

To save the current modifications click on "Save".

Note: You can press cancel at any moment to abort your changes and keep the plug as it was the last time you saved it (or created if never saved).

The screenshot displays a configuration window for a plugin. At the top, there is a blue header bar. Below it, a light blue button labeled 'ADD STEP' is visible. The main area contains a blue card titled 'Action' with a lightbulb icon and a trash icon. Inside the card, there is a dropdown menu labeled 'Action' and a section labeled 'Values' with an upward arrow. The 'Values' section contains two input fields: the first contains the number '277542601807233024', and the second contains the text 'The Channel "\${0.channelTitle}" published a vi'. Below the card, there are three buttons: 'CANCEL', 'DELETE', and 'SAVE' (which is highlighted with a gold border).

Congratulations, you have edited your plug, to make sure everything went well you can go back to the edit page to see if your changes are present.
